

## Volte May 2014 Release Notes

Build 5308 on CMS released Wednesday 5.21.2014

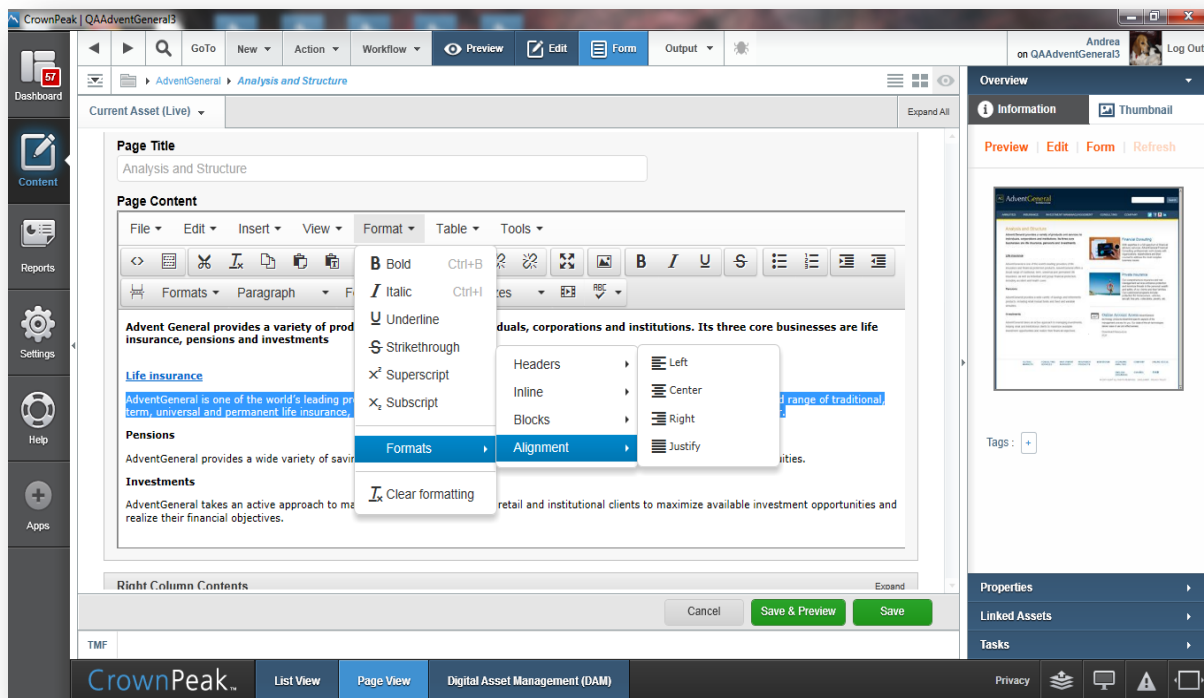

### + Updates in this Release +

The focus for this month is the CMS WYSIWYG editor and TinyMCE version 4. This version of the TinyMCE editor is now available in the CMS. Some of the updates to this editor include: a modern look and feel, easier access to the formatting options, HTML5 video/audio elements by default, and better filtering for the Copy/Paste plug-in. Please contact [support@crowpeak.com](mailto:support@crowpeak.com) to upgrade your instance.

This month's video of the highlights the updated TinyMCE 4 WYSIWYG editor.

## Summary

### ☰ TinyMCE version 4 Support (CMS-3621)

TinyMCE 4.0.16 for WYSIWYG editing in the CMS is now supported. **Contact support to upgrade to this version.**

### ☰ TinyMCE Spell Check (CMS-3747)

The spell check feature has been updated to support of the current TinyMCE 4 options.

### ☰ TinyMCE Scrollbar (CMS-3857)

The WYSIWYG window is now fully accessible while using scrollbars. There are some special cases where they may not appear if the window width is less than the WYSIWYG width.

### ☰ WCO Help Documentation (CMS-3457)

The Dashboard Help widget now includes WCO Help documentation.

### ☰ Heartbleed Update (CMS-3857)

CrownPeak has responded to the security vulnerability called Heartbleed. This vulnerability affects SSL communications that use the popular OpenSSL cryptographic library. The CrownPeak CMS has been reviewed and patched without issue. Please refer to Connect for a full description of the remediation.

### ☰ TinyMCE Video code (CMS-3514)

The existing WYSIWYG content fields now allows for media files to be used without stripping the video code. However the long-term solution is to upgrade to TinyMCE 4.

### ☰ TinyMCE style tags (CMS-4034)

The editor has been updated to allow the use of style tags within body tags.

### ☰ Images not Displaying in CMS (CMS-3968)

Some users reported an issue viewing images in the CMS that were uploaded from the CDC. The issue was tracked down to the storage configuration setting. If this issue appears in your instance, please contact support for assistance.

### ☰ Updates to Dashboard Widgets (CMS-3934)

The Dashboard widgets for Facebook Insights, Google Analytics, and DemandBase now use the CMS connector authentication.

### ☰ Template Errors Slowing Publishing (CMS-4014)

In the past few months, there has been publishing slowness that has been tied back to errors in developer templates. The environment has been updated to identify these issues and minimize the impact to other customers.

## Known Issues with TinyMCE 4

### ☰ Cut and Paste Icons in TinyMCE (CMS-3856)

In the CMS Classic application, the Cut and Paste icons in TinyMCE on Chrome cause an “Unsupported” error. This is due to browser security issues with Chrome. The workaround is to use Internet Explorer.

### ☰ Menu Bar on MAC (CMS-4053)

When editing a C# template in Volte on a MAC, the menu bar will fail to appear above the icon toolbar. Moving the mouse over to the top of the WYSIWYG will make the Menu bar re-appear. This is a visual

### ☰ TinyMCE tables in Volte (CMS-3763)

Using tables within TinyMCE in the CMS can cause CPU usage to hit 100% and cause the application to seem frozen. The application will work again in a few minutes. This is a known issue for TinyMCE being used Out of Browser.

### ☰ VB templates in Volte & MAC (CMS-3860/4074)

When editing a VB templated asset on a MAC, the WYSIWYG may temporarily go blank. This may also occur after clicking the Enter button within the WYSIWYG. Moving the mouse within the window will

bug that only appears when using TinyMCE 4 in  
Volte on a MAC.

cause content window to re-appear.

## Developer Improvements

1. Fixed an issue which occurred when using the Insert Predefined Template option in the WYSIWYG (CMS-4026)
2. Added a Refresh option to reports (CMS-3839)
3. Added the ability to sort the Workflows (CMS-2998)
4. Disabled the +/- option when the max /min panel setting is reached in Classic (CMS-3934)
5. Provided the ability to skip dependency publishing (CMS-2702)
6. Created a new admin role that would allow a user to manage groups and users without access to site content (CMS-2356)
7. Added a new asset type only available within the System/States folder called New State. New State has a model similar to folder which gives you the ability to set the asset name, copy an existing state's ACLs, and enable the state as a default browse state for all users within the instance. (CMS-2549)
8. Disabled the [Save & Preview] and [Save] button when the user/group only have view permissions. (CMS-2398)
9. Enabled mixed copy paste for groups of files and folders (CMS-2427)
10. Added logic to match the first available default/index page at the root level to the starting url of the Orphan Report (CMS-3891)

## Other Updates to the Application

1. Fixed an issue where dependencies may not have published due to the date stored for the asset. (CMS-3365)
2. Added Image Capture support for the new storage system (CMS-3868)
3. Added support in the Asset Picker for Image Upload, Link Load, ImageBrowse and LinkBrowse WYSIWYG parameters (CMS-3964)
4. Disabled the ability to Paste a folder within itself (CMS-3682)
5. Fixed an issue where copied assets would retain the state of the original (CMS-2663)
6. Fixed an issue with page values displayed for a user in Classic (CMS-3950)
7. Fixed an issue which occurred when a user was created belonging to no groups (CMS-3939)
8. Fixed an issue which occurred when viewing the Group Configuration page in Classic (CMS-3951)
9. Fixed an issue while copying or cloning folders resulting in developer template not previewing. New code was added that now detects asset set as developer templates via the API and providing the appropriate subtype value. (CMS-2939)
10. Updated the button text on the User Creation page. (CMS-1951)
11. Updated the DAM image preview to display an icon when the preview is unavailable. (CMS-3966)

12. Updated the Set Schedule logs to give more detailed information when schedules are set and removed. (CMS-3568)
13. Updated the Volte toolbar to display: Language, Output Device and Layout. (CMS-3703)
14. Fixed an issue which could occur when a publishing server has not been used for more than 90 days (CMS-4013)
15. Fixed an error which blocked login when an incorrect value for autobeacons was used (CMS-4000)
16. Fixed an issue which would occur on retires when the last session did not have an error (CMS-4056)
17. Increased the edit file size limit in Classic (CMS-3823)
18. Removed the escaped HTML tags from warning messages in Classic (CMS-3915)
19. Reordered the query which loads the schedules in Set Schedules (CMS-4027)
20. Several new Dashboard widgets have been updated to use Connectors (CMS-3992)
21. The Clear Errors option was added to the Publishing -> Errors Report (CMS-3925)
22. Updated functionality on the Set Schedule option (CMS-3926)
23. Updated the logic behind the Set Schedule option for an asset (CMS-3988)
24. Updated the workflow email logic in Classic (CMS-3810)
25. Fixed a visual issue which occurred when inserting an image using TinyMCE on a Mac (CMS-3858, CMS-3860)
26. Added a warning when attempting to remove a user from all CMS groups (CMS-3794)
27. Fixed an issue in which an error would occur when no WYSWYG preference was set (CMS-3820)
28. Updated the WCO API Guide & Release Note link in the Help widget (CMS-4017, CMS-4091)
