

## Volte June 2014 Release Notes

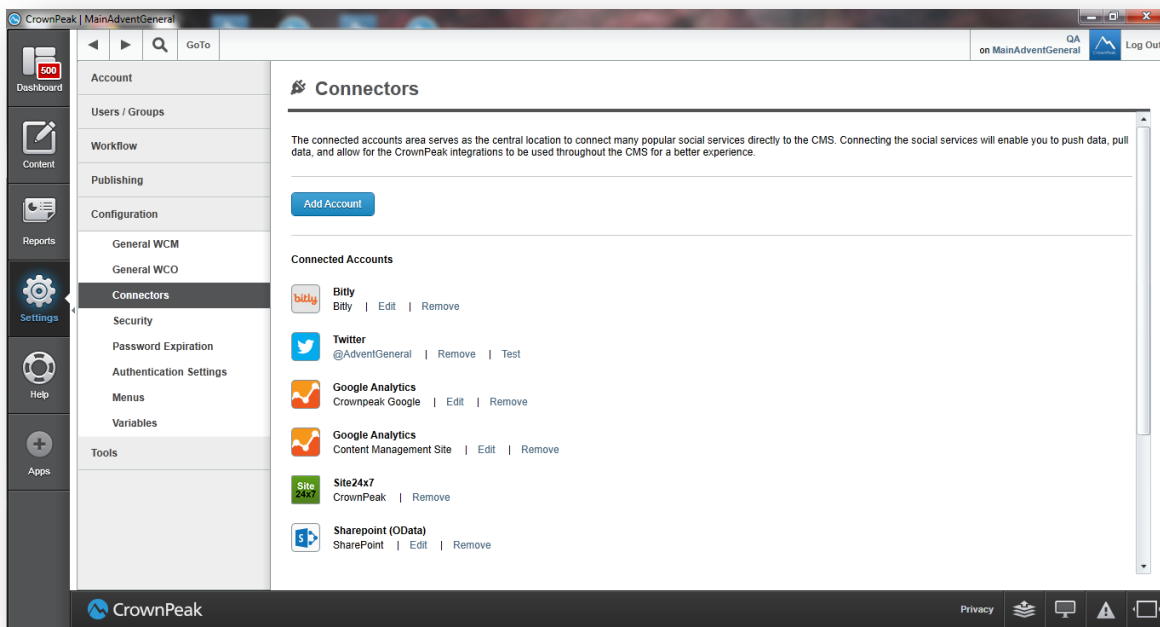

Build 5367 on CMS released Wednesday 6.18.2014

### + Updates in this Release +

The focus for this month is CMS Connectors. Connectors are a quick and direct method to leverage the CrownPeak Marketplace. Start by selecting a connector and enter your authentication credentials. Connectors can be used in dashboard widgets such as Google Analytics, Facebook Insights, and Demandbase. Connectors can also be used to send and receive data to social sites, document management sites, and more.

See the Connector demonstration video at:

<http://connect.crownpeak.com/products>

## Summary

### ■ Dashboard Widgets Connectors (CMS-3992)

The Google Analytics, Demandbase and Facebook Insights dashboard widgets now use CMS Connectors. Look for connectors by navigating to **[Settings][Configuration][Connectors]**.

### ■ Demandbase Widget (CMS-4108)

The Demandbase widget now displays a message when attempting to save without selecting a Connector or date range.

#### ■ Widget Display (CMS-4087)

The Demandbase and Facebook widgets now display a placeholder after toggling the open/close settings.

#### ■ Help Widget (CMS-4091)

The Help widget now links to the current Release Notes and the WCO API guide.

## Developer Improvements

1. Fixed an issue with `Asset.CreateBranch` not working correctly (CMS-3889)
2. Fixed an issue with `ContentField` in hybrid templates (CMS-3357)
3. Fixed an issue where the overlay was not rendering correctly when using `In Context` editing (CMS-4118)
4. Fixed an issue with passing values between output templates (CMS-4063)
5. Updated the validation message when attempting to save invalid input data (CMS-4096)
6. Added a check for blank content in C# pages (CMS-4144)
7. Fixed an issue in the output pagination to account for C# templates starting at page 1 (CMS-4046)
8. Added `RouteAssets` and `RouteCollections` to the API. Also modified `RouteAssets` to use long running task if more than 10 assets are routed (CMS-3768)
9. Fixed an issue with `FilterParams.FieldNames` preloading empty strings for fields not found (CMS-4149)

## Other Updates to the Application

1. Fixed an error message from popping up if WCO was not enabled on an instance (CMS-4113)
2. Fixed an issue in Classic IE only where the second password textbox would be blank when editing a user (CMS-4143)
3. Fixed an issue in Classic where editing a user would cause an error (CMS-4119)
4. Fixed an issue in the image capture which caused black bands to appear in an asset thumbnail (CMS-4121)
5. Fixed an issue in TinyMCE in which the web browser would not allow a user to exit Volte (Mac only) (CMS-4094)
6. Fixed an issue which was causing database look-up to fail for workflow filters (CMS-3908)
7. Fixed an issue with models not moving correctly through the workflow (CMS-2895)
8. Updated the User report to include the Expired Date column (CMS-3991)
9. Added set template and set workflow group ACL's to the group permission list (CMS-4216)
10. Added a fix for Image Capture service not processing WMV and WMA files (CMS-4116)
11. Fixed an issue which would occur when attempting to copy an asset with the same snippet attached to multiple fields (CMS-4179)
12. Fixed the refresh and close icons to match for consistency in property detail views (CMS-4040)
13. Updated the Set Schedule page for an asset (CMS-4054)
