

August 2014 Release Notes

Build 5515 on CMS released Wednesday 8.20.2014

+ Updates in this Release +

The August release showcases improvements in several areas. We continue with the next set of developer-focused updates both within the CMS and through the CrownPeak Services Library API. There are also a number of additions to the CMS preview experience as well as several improvements to the WCO targeting rules. Look for:

- An improved preview experience for different layouts, languages, and device types
- New geographical targeting rules that use latitude, longitude, and postal codes
- Enhanced personalization control with improved “OR” logic options
- A new web services library designed for CMS developers and agencies

CrownPeak Preview Experience (Dropdowns for layouts, languages, device types)

Summary

Content Dropdown (CMS-3894)

New Layout, Language and Device drop-downs have been added to the Preview screen in the CMS. These options allow for additional Preview capability prior to publishing pages to the live site. Please view the video on Connect for a brief introduction on usage.

Filter Focus (CMS-3913)

Focus is the term used to describe where the cursor is placed on a page after loading. The focus on the filter drop down bar has been improved. Now you can instantly start typing, selected options will be retained, and toggle the display on or off with the **[Ctrl]+[Shift]+[T]** keyboard shortcut.

Duplicate Name Publishing (CMS-4345)

An asset would fail to publish if there was a duplicate row in the publishing properties page. The algorithm has been updated to check for duplicated and respond accordingly.

TinyMCE browse window (CMS-4347)

The browse icon appears when selecting the Insert {option} from the drop-down allowing for media selection.

Active Standards Connector (CMS-4316)

A new Active Standards Connector is available in the CMS. This Connector can be set up in the Settings section and then accessed by clicking **[Integrations]** on the Right Hand Shade of an asset.

Hyperlink Services Library (CMS-4248)

A new addition to the service library helps with hyperlinks. Use the following calls for a consistent yet flexible best practice pattern to create CMS-managed link groups:

- ServicesOutput.HyperLink
- ServicesInput.ShowHyperLink,
- RenderHylerLinkList

Delete key focus (CMS-4366)

The [Delete] key action while in an open asset has been updated to focus on the text and not the overall asset.

Task Asset Access (CMS-4412)

The Task widget on the dashboard now allows for a quick link to navigate to the asset. Look for this help link by clicking **[Edit Task]** then clicking the **[Associate With File]** link to jump to the asset.

Developer Improvements

1. *The Publishing Package screen has been revamped for ease of use, clarity and to alleviate timeout issues (CMS-4428)*
2. *Templates display as "Checked Out" in Reports when opened for edit (CMS-3880)*
3. *The VB template hidden class appears correctly during edit (CMS-4191)*
4. *File extensions appear correctly on the Asset General Properties page (CMS-3331)*
5. *Report messages have been clarified when no report data is available (CMS-3309)*
6. *The Model List drop-down displays icons to aid in file selection (CMS-4148)*
7. *All usernames appear in Reports (CMS-3386)*
8. *The [--Any--] option remains at the top the drop-down list for the Audit report (CMS-4335)*
9. *The Asset pathname is available on the Model Properties page (CMS-3536)*
10. *The FileView reload after a long running route job (CMS-4234)*
11. *Task comments display as active upon opening the Asset's property shade (CMS-2493)*

12. *Entities will be converted to unicode after the template runs (CMS-4360)*
13. *The label will match the upload name when using BrowseType = Relationship Type.Attach on showAcquire Input (CMS-4291)*
14. *Util.LoadXml will accept an optional parameter of type Dictionary<string, string> which should contain the xmlns prefix as the key and the namespace URL as the value (CMS-4342)*

WCO Updates

1. *New filter options “Is Contained In” and “Is not contained in” are available on the Ambient/Geo, Form, and Integration targeting tabs allowing basic (and/or) logic targeting rules (WCO-170)*
2. *Geo Location has been added for Targeting purposes on the Ambient targeting tab (WCO-182)*

Other Updates

1. *The Set Schedule Time field options have been updated (CMS-4228)*
2. *Workflow status will appear for all applicable Assets when routing (CMS-3764)*
3. *The WYSIWYG panel no longer overlaps the edit window border (CMS-4192)*
4. *Toaster messages appear correctly for all language choices (CMS-3350)*
5. *The ability to delete multi-selected workflows has been added (CMS-4343)*
6. *New workflows appear in the workflow properties without a screen refresh (CMS-3965)*
7. *Notifications correctly appear when editing and saving a State (CMS-3373)*
8. *Radio buttons work in new list panels regardless of panel placement (CMS-4384)*
9. *A Clear button has been added to the Settings -> User/Groups -> Users page (CMS-4333)*
10. *Log In screen messages have been updated for consistency (CMS-4410)*
11. *A Reset button has been added to the time restriction section on the Security Settings page (CMS-2846)*
12. *Custom styles can be imported via the Format drop-down in the TinyMCE editor (CMS-4172)*
13. *Set Schedule Publishing options have been updated to respect the minute settings (CMS-4390)*
14. *Tooltips are now available on the Site Summary Report (CMS-4398)*
15. *The ability to Branch has been added to the Acquire Window (CMS-4389)*
16. *The correct icon shows for FTP mounts (CMS-4358)*
17. *The toaster message will appear only the first time after searching the Asset Publish Audit report (CMS-4466)*
18. *Open panels will be closed when navigating to a new area of the CMS (CMS-3260)*
19. *Template report code has been updated to alleviate timeouts (CMS-2780)*

Note: The Java Runtime Environment (JRE) version 1.7.0_67 was released this week. CrownPeak has testing this new version with the Ephox editor to ensure compatibility. We found no issues when editing within the CMS after upgrading to this version.
