

## The Benefits of Crownpeak DXM vs. Adobe Experience Manager

### The SaaS Advantage

When Adobe, and many other monolithic Web Content Management (WCM) platforms, refer to their solution as “cloud,” they’re not providing the full story. Adobe Experience Manager (AEM) is a Platform-as-a-Service (PaaS), which means that the upkeep of the software (upgrades, patches, fixes) is on you or an implementation partner.

These software upgrade implementations – often costing hundreds of thousands of dollars and months of development time – still plague customers of cloud-based PaaS platforms throughout the relationship.

In contrast, Crownpeak Digital Experience Management (DXM) platform is a true Software-as-a-Service (SaaS) solution. Not only do you benefit from all that a cloud solution offers, but our software is fully maintained by us ... for you. Upgrades are automatic and behind-the-scenes, which means you will always be on the latest version with automatic access to new features, performance improvements, and security enhancements without any additional costs or worry.

### What real customers are saying

Crownpeak DXM is proud to be the top-rated CMS on TrustRadius, as voted by real users.

### Let’s take a look at what Crownpeak provides:

#### Rapid onboarding

Crownpeak DXM can be provisioned at a moment’s notice and does not require you to install or configure software or hardware. With AEM, it can take months to build the necessary tooling (editorial tools/environments) to start configuring and building digital experiences.

#### Fastest time-to-market

Crownpeak DXM was designed for how modern web development works, resulting in more flexibility for your developers and an overall lighter development effort. With Crownpeak DXM, you can deliver web experiences in 6–8 weeks. With AEM, achieving the same results will take between 12–24 months.

### Versionless and upgrade free

Because Crownpeak is a SaaS platform, upgrades are automatic and require no work from your teams. When Adobe releases a new version, customers must manually implement the upgrade – or pay significant costs for someone to do it for them. With Crownpeak, you get access to new features and enhancements immediately when they are released every two weeks.

### Best-in-class security

When Adobe identifies a security vulnerability, they release a patch to upgrade the software, but their customers remain vulnerable to security risks until they upgrade and implement the patch themselves. Because Crownpeak is SaaS, security updates are delivered automatically, ensuring maximum security and threat protection at all times. As an AWS Advanced Technology Partner, Crownpeak meets the highest industry standards for security and regulatory compliance – we’re the most secure digital experience management platform available.

### Future-proof and flexible

Crownpeak DXM offers both decoupled and headless, API-first delivery models designed to support today’s fast-evolving, multi-channel environments. Built with marketers in mind, DXM gives you the flexibility to deliver content to any channel and engage on new and emerging channels like Augmented Reality, Virtual Reality, and the Internet of Things. In contrast, traditional WCMs like AEM were solely made for websites. While efforts have been made to modernize them by grafting on APIs, they are essentially locked into old architectures, and falling quickly behind API-native vendors. Industry analysts warn that enterprises that cling to traditional CMS models will find themselves falling behind too.

### Total Cost of Ownership

AEM, like other traditional content management systems, comes with high infrastructure, maintenance, and software upgrade costs, in both time and money, that can hold organizations back. Because Crownpeak DXM is SaaS, carrying costs are eliminated, reducing the Total Cost of Ownership (TCO) of your web infrastructure.

	CROWNPEAK DXM	ADOBE EXPERIENCE MANAGER
<b>SOFTWARE</b>	SaaS	PaaS
<b>HEADLESS/API-FIRST DELIVERY</b>	Yes	Hybrid
<b>IMPLEMENTATION COST</b>	1x cost of software (average)	4-5 x cost of software (average)
<b>ON-BOARDING TIME</b>	Hours	8-10 months (average)
<b>TIME-TO-MARKET</b>	6-8 weeks (average)	12-24 months (average)
<b>UPGRADES</b>	Automatic, every 2 weeks	Significant planning needed, resource disruption
<b>SECURITY</b>	Best-in-class	Relies on underlying IaaS vendor’s credentials
